Response to Amendment

This action is in response to request for reconsideration filed on 6/17/2005

As per applicant's request claims 1-20 has been consideration but they are not persuasive

Claims 1-20 stand rejected under 35 U.S.C 102(e) as being unpatentable over *Fraley et al* USPN 6,623,492.

In remarks applicant argues,

I) "Any interaction of automation objects with physical equipment units of a system let alone "assigning... automation object to physical equipment units of a system".

Response to applicant's argument,

I) It was noted that cited reference teaches about the componentizing object designer and to define componentizing of visual forms and automation and interaction of automation objects using for support services. Reference also implies that the created objects for the application interact with other object (physical equipments) since the objects have been developed for physical equipment to interact in automated environment such as ATM machines etc. (see column 1, lines 34-40) for how object interact and communicate within single application client-sever....". Therefore, examiner interprets that the objects have been developed for an automated application where physical equipment is used such as elevator/microwave etc. and interaction take place since objects have been programmed to function as they have been designed for that particular application. Thus limitations are met by the reference.
